Abstract

Objective of the Study

1 Logistic regression 1

1.1 Introduction to Logistic Regression Model

1.2 Assumptions of Logistic Regression Models

1.3 Estimation of Parameters using MLE

1.4 Significance of the Predictors

2 Summary & Goodness of Logistic Regression Model 5

2.1 Odds ratio

2.2 Akaike Information Criterion (AIC)

2.3 Confusion Matrix and Accuracy

2.4 Area Under the ROC Curve

2.5 Backward Elimination

3 CardioVascular disease Dataset 6

3.1 Data Description

3.2 Checking for the Multicollinearity

3.3 Manipulation of the Data

4 Model Selection Using R 10

4.1 Exploring the Full Model

4.2 Selecting the best regression Model

4.3 Interpretation of the model

5 Overview of the Model 45

5.1 Overview of Final Model

5.2 Testing the full model

6 Conclusions 50

Scope of Future works
